

ProChip FLEX Manager 1.2.5 Release Notes & Instructions

Introduction and reasons for update

MYLAPS is continuously working to improve its products and ensure the highest quality. To make sure that all systems operate correctly, regular software- and firmware updates are required.

Improvements

The ProChip FLEX Manager 1.2.5 release includes the following improvements:

- Fixed missing translations for some texts.

Known Issues

We're always working to resolve issues. If your issue is listed below, we're aware of it and are working to fix it as soon as possible.

- Incidentally the activation process fails, displaying the message: "Activation Failed". If this happens please repeat the activation procedure.

Installation instructions

Follow the instructions below to install the new ProChip FLEX Manager:

- Run ProChip FLEX Manager. If there is an update available you will be automatically prompted to install the new version.
- If you do not have the ProChip FLEX Manager, download it from the FLEX website: <http://flex.mylaps.com> and follow the on-screen installation instructions.
